

AIR PISTOL

USAGE:

For general shooting training & hobby shooting

SPECIFICATIONS:

1. Caliber 4.5MM
2. Rifling 12
3. Barrel length 180MM
4. Overall length 329MM
5. Weight 1.1-1.3KG

PERFORMANCE:

Using 4.5mm lead pellets for air pistol, shooting at 6 meter effective range, the shooting dispersion is about 4cm

OPERATION:

1. Hold the stock with the right hand and the front part of the barrel with left hand, press the barrel to turn down.
2. Press the barrel continuously till the sear is connected with the piston.
3. Insert a pellet into the chamber with the left hand, and lift the barrel upwards to the sliding lock lever and make the barrel go back to its position.
4. Hold the stock with the right hand and aim by the right eye to make the up-side of the gap, the front sight and the down-side of the target be a straight line. Now ready to fire.

ATTENTION:

1. Before use, clean the rust-proof oil on the pistol. After use, clean the pistol, and then have covered it with the gun-oil slightly.
2. Use 4.5mm lead pellets, never use nails, pins or any other substitutes instead when shooting in order not to damage the bore.
3. Don't trigger unless the barrel goes back to its position to avoid any possible damage to the barrel and other parts, or accidents.
4. Don't retain the spring pressure for a too long time, nor often fire the pistol without pellets in order not to affect the firing accuracy.
5. Put several drops of gun-oil in the working parts at regular intervals and it will help lubrication.
